JACKSON ELLIOTT

Junior Software Developer | Florida | (574) 265-8708 | jaxjoelliott33@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

Computer science graduate with production experience building and maintaining full stack applications and AWS infrastructure. Works across TypeScript, Node.js, React, PostgreSQL, REST APIs, serverless AWS, Terraform, and CI/CD. Shipped production features, a database migration, and backend automation for an AI marina management startup, plus three deployed projects.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, C++, SQL, HTML/CSS
Frameworks: Node.js, Express.js, React
Backend & Data: REST APIs, PostgreSQL (AWS RDS), MongoDB, GraphQL, JWT Auth
Cloud & DevOps: AWS (Lambda, API Gateway, DynamoDB, S3, RDS, SQS), Terraform, GitHub Actions, CI/CD, Docker
Tools: Git, Jest, Postman, Anthropic SDK, GitHub Copilot, Cursor, Shopify, NetSuite

EDUCATION

Palm Beach Atlantic University, B.S. Computer Science, Minor in Business Administration, May 2026 | Outstanding Graduate in Computer Science | GPA: 3.93 | Dean's List (2x), Provost's List (6x)

EXPERIENCE

Admiral / HarborMoor Technologies, *Software Developer, Contract* *Jul 2026 to Sep 2026*

- Opened 16 pull requests across 18 tickets in production vendor management portal (Nx monorepo), with 6 tickets shipped to production and every PR through code review and CI
- Delivered production features and fixes across check in kiosk, vendor agreement, insurance certificate email, and staff access workflows, including a same day fix for duplicate reminder emails
- Stabilized and migrated a production Node.js, TypeScript, and React CRM: resolved 19+ crash level bugs across 21 files and moved the database from SQLite to AWS RDS Postgres
- Replaced 3 Zapier automations with an event driven AWS Lambda architecture (Function URLs, least privilege IAM per function, Secrets Manager) to reduce SaaS costs
- Built and ran a PostgreSQL backed internal tool on RDS with role scoped access control and parameterized queries, used by a non technical operations team for real time data edits

REDVANLY, *Assistant Store Manager, West Palm Beach, FL* *Sep 2025 to May 2026*

- Managed store operations including scheduling, training, inventory tracking, stock replenishment, and digital product listings in Shopify and NetSuite

PROJECTS

TaskFlow: Full Stack Task Manager *Node.js, React, MongoDB, JWT, REST API*

- Built and deployed a full stack task manager to production on Vercel: a React frontend backed by a Node.js/Express REST API with MongoDB persistence and UI state synced to server responses
- Implemented stateless JWT authentication with protected API routes, ensuring no unauthorized data access across all endpoints

aws-job-status-api: Async Job Processing API *TypeScript, AWS Lambda, API Gateway, SQS/DLQ, DynamoDB, CloudWatch, Terraform*

- Designed and deployed an asynchronous job processing API on AWS Lambda (Node.js 22), API Gateway, SQS, and DynamoDB, tracking jobs through PENDING, PROCESSING, and COMPLETED states
- Added a dead letter queue with a 3 retry redrive policy and a CloudWatch queue depth alarm, tested with Jest and Postman, with 100% of infrastructure in Terraform and a scoped IAM role per Lambda

ApplicationFlow: Job Application Tracker *Lambda, API Gateway, DynamoDB, S3, Terraform, GitHub Actions*

- Built a serverless REST API with 5 endpoints on Lambda, API Gateway, and DynamoDB, with infrastructure in Terraform (remote state in S3) and automated deployments through GitHub Actions
