SUMMARY

CS graduate (3.93 GPA, May 2026) targeting cloud and serverless developer roles. Shipped full stack and serverless applications to production, including a fully automated CI/CD pipeline on AWS using Lambda, API Gateway, DynamoDB, and Terraform.

TECHNICAL SKILLS

Languages: TypeScript, Python, JavaScript, Java, C++, SQL, HTML/CSS

Frameworks: Node.js, Express.js, React, OpenGL

Cloud & DevOps: AWS (Lambda, API Gateway, DynamoDB, S3), Terraform, GitHub Actions, CI/CD, RDS

Backend & APIs: REST APIs, Postgres, GraphQL, JWT Auth, MongoDB

Tools: Git, Shopify, Jest, NetSuite, GitHub Copilot, Postman, Anthropic SDK

EDUCATION

Palm Beach Atlantic University — B.S. Computer Science, Minor in Business Administration | Outstanding Graduate in Computer Science | GPA: 3.93 | Dean's List (2x), Provost's List (6x)

EXPERIENCE

Admiral / HarborMoor Technologies *Full Stack Developer, Contract* | June 2026

- Stabilized and migrated a Node.js/TypeScript/React CRM from SQLite to AWS RDS Postgres, resolving 19+ crash-level bugs across 21 files
- Built pipeline management system with Kanban and table views, drag-and-drop stage movement, and weighted deal value tracking
- Implemented AI-powered conversation intelligence using Anthropic SDK with knowledge base injection into every AI prompt

REDVANLY *Assistant Store Manager, West Palm Beach, FL* | Sep 2025 – May 2026

- Managed store operations including scheduling, training, inventory tracking, stock replenishment, and digital product listings via Shopify and NetSuite

PROJECTS

aws-job-status-api — **Async Job Processing API** *TypeScript, AWS Lambda, API Gateway, SQS/DLQ, DynamoDB, CloudWatch, Terraform*

- Designed and deployed an asynchronous job-processing API on AWS Lambda (Node.js 22), API Gateway, SQS, and DynamoDB, tracking jobs through PENDING, PROCESSING, and COMPLETED states via a submit/worker/status Lambda pipeline
- Built in resilience with a Dead Letter Queue, 3-retry redrive policy, and a CloudWatch alarm on queue depth, so failed jobs surface instead of failing silently
- Enforced least-privilege IAM with a dedicated scoped role per Lambda, and validated all endpoints with Jest unit tests, a Postman collection, and 100% infrastructure as code via Terraform with remote state in S3

ApplicationFlow — **Job Application Tracker** *Lambda, API Gateway, DynamoDB, S3, Terraform, GitHub Actions*

- Designed and deployed a serverless REST API with 5 endpoints using AWS Lambda, API Gateway, and DynamoDB, with all data operations handled server-side
- Provisioned 100% of infrastructure as code with Terraform including per-function least-privilege IAM policies, remote state in S3, and automated deployments via GitHub Actions

TaskFlow — **Full-Stack Task Manager** *Node.js, React, MongoDB, JWT, REST API*

- Designed and deployed a full-stack task management app to production on Vercel
- Implemented stateless JWT authentication with protected API routes, ensuring no unauthorized data access across all endpoints
- Built a React frontend backed by a Node.js/Express REST API, with MongoDB persistence and real-time UI state synchronized to server responses
